CARGO SENSORS

DESCRIPTION

An XTRA Lease trailer equipped with a **cargo sensor** indicates whether the trailer is empty or loaded. The **cargo status** displays automatically in the trailer tracking portal when it's relevant to a task, for example, when you want to filter your trailer list to see only empty trailers.
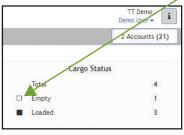

Quick Look – How to

- To get a count of loaded and empty trailers, look at **Cargo Status** on the dashboard.

- To see whether a single trailer is loaded or empty, look at the **square icon next to a Trailer ID** in the list or on the map.

- To see when a trailer's cargo status changed (from loaded to empty or vice versa), look at the **date/time stamp** for that trailer on the map or click on the **Trailer ID** in the list to display the segments of that trailer's trip.

FEATURES	REAL-LIFE BENEFITS
The Cargo Status area on the dashboard shows how many of your trailers are loaded and empty.	Easily drill down to find out which trailers are empty and where they're located so you can get them moving.
View the cargo status of trailers at your custom Landmarks.	Find an empty trailer for your driver to pick up. See how many trailers are loitering empty in your customer's yard and how long they've been there.
See the places, date and time a trailer was loaded and unloaded along its route.	Manage your trailer's detention based on cargo status and times.
Analyze the events along a trailer's route by downloading its trip history to Excel.	Validate that what you heard from your customer matches what you heard from your driver.
